COUNTER

Application Counting ON/OFF of contact points and switches
Description Input of ON/OFF signals

Application Measurement of individual sensors
Description Input of pulse signal

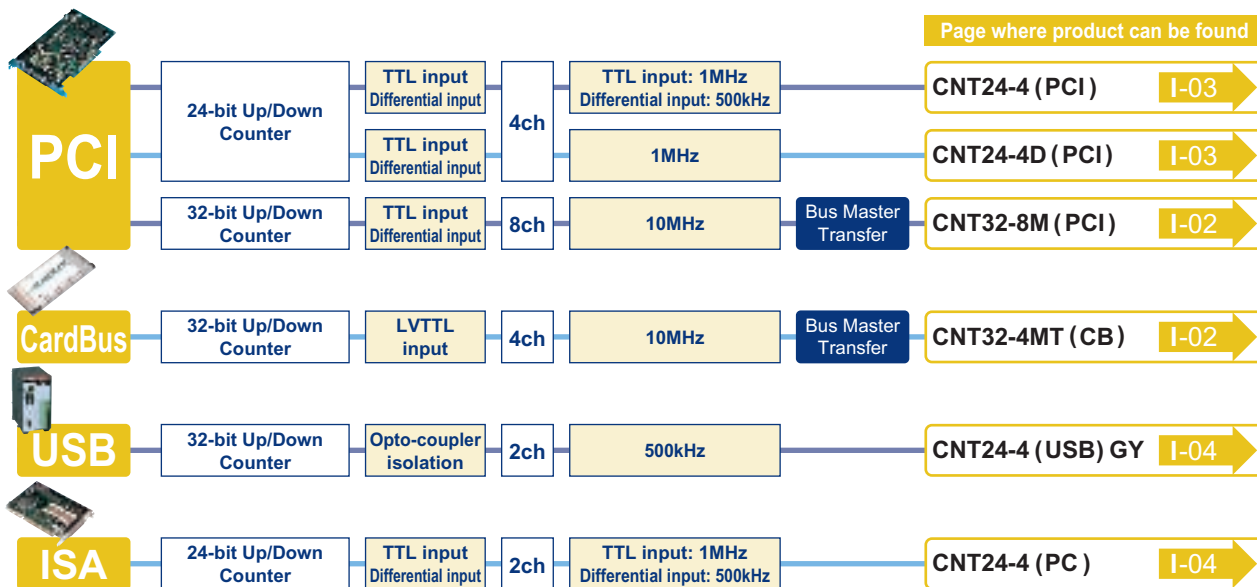

These boards communicate pulse train input and pulse number count functions to the PC.

They calculate addition and/or subtraction of count values onboard and read out current count values when needed.

They can connect to incremental rotary encodes, linear gauges, pulse-output type flowmeters or power meters.

Product Lineup

You can choose from a variety of interface boards according to your desired bus, I/O points and I/O type.

Bus Specifications

- PCI** The product is compliant with PCI standard and can be used in computers equipped with PCI bus expansion slot.
- USB 2.0** The product is compliant with USB standard and can be used with laptop computers equipped with USB2.0/1.1 ports. It also supports USB2.0 high-speed mode(480Mbps).
- Card Bus** The product supports CardBus which is a 32-bit bus compliant with PC card standard.

Supported Connectors

- 96-pin Half Pitc** / **37-pin D-SUB**
- Indicates the number of pins and shapes of connectors used for external connection. The supported cables and accessories will vary depending on the number of pins and the shape of connectors.
- We provide a wide variety of cables and accessories to suit your needs.
- Cables equipped with connectors on both ends Accessories (Terminal blocks, etc.) **O-13**
- Cables equipped with a connector on one end Connector set **O-15**

Number of Channels Connectors

- Counter XXch** Maximum number of channels of pulse signals that can be input

Points

- Differential Input** A level input circuit in which differential receiver is used as input terminal. While it is not insulated from external circuit, it supports high-speed pulse input. Also noise-resistant, it allows for long-distance transfer.
- Isolated Input** A current input circuit in which an opto-coupler (cathode side) is used as the input terminal. Isolated from external circuits, it can prevent electric disturbance.
- TTL Input** A level-input circuit in which a TTL-IC (base) is used as the input terminal. While not Isolated from external circuits, it enables high-speed pulse input.
- Digital Filter** Delays the count processing by the specified length of time. By preventing incorrect counting induced by noise such as chattering, it ensures precise operation.
- Disconnection Detection** During differential input, an error alarm is issued upon detection of a signal wire disconnection. (Status, interrupt, external output)
- Surge Protection** The input interface is equipped with a Zener diode which prevents damage and malfunction induced by voltage surges and incoming current.

Support software

- Windows Driver** API-TOOLS for Windows is provided. License-free drivers (both development and runtime) that provide commands to add-on boards or cards in Windows using the standard Win32API function (DLL).
- Linux Diver** API-TOOLS for Linux is provided. License-free drivers (both development and runtime) that provide commands to add-on boards or cards using module-style device drivers and the shared library
- LabVIEW** VI-DAQ, VI Library for use with National Instruments' LabVIEW can be downloaded from our Web site. With its function and form similar to that of "Data Acquisition VI" of LabVIEW, VI-DAQ allows easy operation of devices without requiring complicated set-up.

PCI 96-pin Half Pitch Counter 8ch Differential Input TTL Input Digital Filter Disconnection Detection Bus Master CE
Windows Driver

Bus Master Transfer High Speed 8-channel 32-bit Up/Down Counter CNT32-8M(PCI)

- 8-channel, 32-bit up/down counter
- Capable of counting two-phase signals from devices like rotary encoders or linear gauges
- Disconnection can be detected at the time of differential input
- When using the bus master transfer feature, data between the board and PC can be transferred at a speed of 80MB/sec (max.133MB/sec) with no additional load on the computer.
- Synchronous Control Connector to enable the synchronous operation of a number of boards (regardless of type).

Card Bus 68-pin 0.8mm Pitch Counter 4ch TTL Input Digital Filter Bus Master

High Speed 4 channel 32-Bit Up/Down Counter CNT32-4MT(CB)

NEW

- 4-channel 32-bit up/down counter, LVTTTL input supported
- Capable of counting two-phase signals from devices like rotary encoders or linear gauges
- High-speed data transfer achieved by using the bus master transfer feature
- Can be converted into differential input interface by using differential/TTL input terminal (CTP-4D) and a connecting cable (CNT-68M/50M) both of which are sold separately

* This card cannot be used with another card requiring external connections when used on a PC with 2 TYPEII PC card slots. For simultaneous use, the other card must be a PC card (excluding memory card) that does not require an external connector.

MOTOR CONTROLLERS

Enables PC controlled output of pulse train according to a specified pulse number and frequency.
 Can automatically output control pulse which corresponds to operation parameters such as target position, speed and acceleration / deceleration rate. Limit input functions [required for positioning control] are also provided.
 For use with pulse-input type stepping motors or servo motors..
