

IPORT108P1 box is your solution.

1. Can offer 5V power output for external RS232 device.

You just need to control one power supply for whole system.

2. Easy to add extra COM port for PC box with LAN

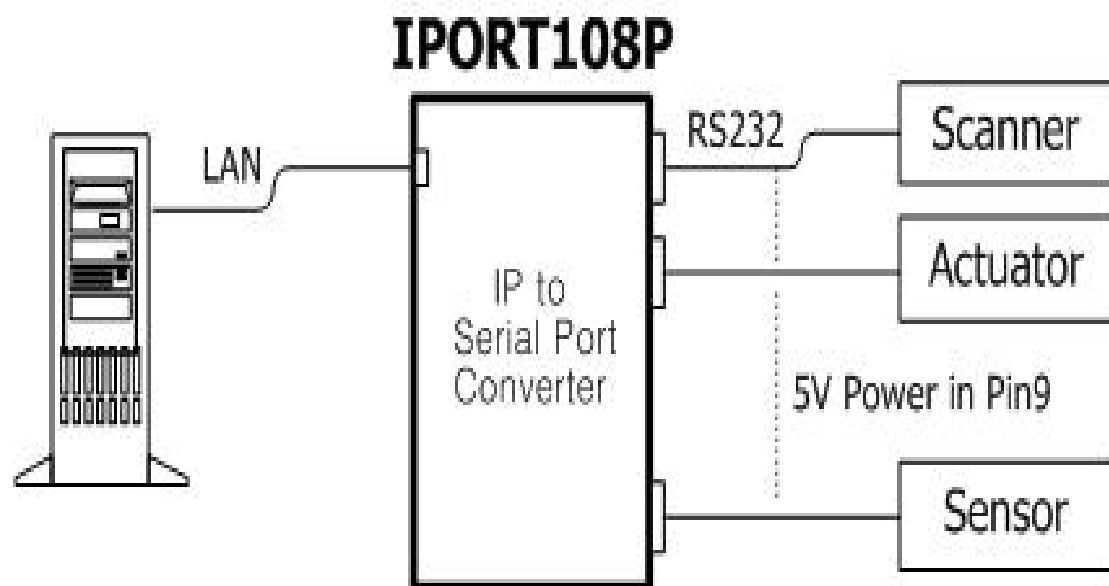

connector only condition.

For security issue you can not use USB connection and let anybody to open your IPC cabinet. Keep your hardware and software in known condition after setup.

3. Legacy RS232 device in new network era. To be used in

any IP network reachable location.

No distance limitation in USB connection and add-on card.

This is one structure for test equipment used in iPhone 7's production work line. And you can have similar structure in your next application environment. IPORT108P box is your solution.
